# Preface

This book aims to teach you applied statistics in the context of education research. The goal of this book is to serve as an interactive introduction to quantitative analysis of educational data using Stata. The topics covered include descriptive statistics, correlation, statistical inference and hypothesis testing, and multiple regression. The content includes both a description of the concepts, and coding to implement the analyses using Stata.

There are already many books and other resources to learn statistics, or Stata. Why should you read this one (and why should we write it)? The aim of this book is to introduce statistics, from foundational concepts to sophisticated models, in an applied context, and focused on educational data.

This book is written using Quarto Book ... The work is licensed under ....

# **Acknowledgements**

My approach for much of the material presented comes from my training as a student in graduate school where I learned from Judith Singer, and serving as a teaching fellow, especially with Andrew Ho. I also built on the work of my colleagues in the education department John Papay and Matthew Kraft. Finally, I am thankful to the teaching assistants and students of EDUC 1230 and EDUC 2320 who have helped me refine teaching materials over the years. This book was inspired in part by Dr. Alice Paul's book Mastering Health Data Science Using R. The content for book.

# 1 Introduction to Stata

This chapter introduces you to Stata, how to install it and the different ways to use it for statistical analysis. Stata is a powerful tool, but it remains a tool. The statistical concepts you learn are more important, and you will likely have to change the tools you use throughout your career. As a Brown University affiliate, you can download and install the software following instructions on this page. There are many versions of Stata, and you should install the latest version available. The code included in this book will work for version 17 and those more recent. Stata / IC should be sufficient for most of the

## 1.1 1.1 Stata window components

The screenshot shows the Stata/SE 18.0 interface. The title bar reads "Stata/SE 18.0". The main window has two tabs: "History" and "Results". The "Results" tab is active, displaying the following text:

```
____ / ____ / ____ / ____ / ____ / ____ @

Notes:  
1. Unicode is supported; see help unicode_advice.  
2. Maximum number of variables is set to 5,000 but can be increased; see help set_maxvar.  
3. New update available; type -update all-
```

The "Command" tab is visible below the results area. At the bottom left is a search bar with the placeholder "(Q)". At the bottom right is the path "/Users/simaraha/Downloads".

Figure 1.1: Stata Window <sup>7</sup>

- 1.2 Stata syntax and Naming conventions
  - 1.3 Using the command prompt
    - 1.3.1 Make students use it as a calculator
  - 1.4 Loading data
    - 1.4.1 Introduce an educational dataset – maybe OECD, NCES, open dataset Working Directory
    - 1.4.2 Stata code count, describe, labels, etc.
  - 1.5 Installing Packages
    - 1.5.1 Give some examples to do
  - 1.6 Tips and resources
    - 1.6.1 Give some links to pages

## **2 Introduction to Data and Univariate Descriptive Statistics**

### **2.0.1 2.1 Types of Variables**

Numerical Vs Categorical

Numerical: Continuous VS Discrete

Continuous: Interval VS Scale

Categorical: ordinal vs nonnominal

Include definitions, examples

Load the data from Chapter 1

### **2.0.2 2.2 Mean, Median, Mode**

### **2.0.3 2.3 Spread: range, IQR, Sd**

### **2.0.4 2.4 Visualizing univariate**

qua2.4.1 Bar chart

2.4.2 Hist & Density

### 3 Summary

In summary, this book has no content whatsoever.
